

# LIMINI COFFEE

— SPECIALITY COFFEE ROASTERS —

## Vostok installation guidelines

These guidelines work fantastic for Limini Blend.

### General settings

- Boiler temperature: 128 C
- Brew boiler temperature: 93 C
- Group temperatures: 93 C each

### Group settings

- AUTO, PRESSURE
- Short shot: 17g in, 25g out in 27 sec (about 7.5 to 8.2 BAR)
- Long shot: 16g in, 32g out in 27 sec (about 7 BAR)

### Weekly timer

- Please ask the customer if they would like this turned on. See manual for instructions.

### Backflushing

The Vostok, with the dosing system installed, can be backflushed. Unlike a pump machine, backflushing the Vostok is hardly necessary (especially with the safety system installed). No more than once a week with a tiny amount of cleaning powder.

**User manual can be found here:**
